From papers to a testable idea.

A research workspace for students and small teams.

01

Scattered evidence

Papers live across different sources.

02

An unclear next step

What is worth investigating—and testing?

Find connections. Inspect evidence. Plan a first test.

One connected workflow

Start with one field and a research question.

01
Focus
Question
+ field

02
Papers
Choose
4–6 papers

03
Mind map
Compare
+ connect

04
Hypothesis
Generate
a proposal

05
Experiment
Edit a
first test

FREE-PAPER DISCOVERY

OpenAlex

Europe PMC

arXiv

Your data, equipment, skills, and deadline guide the proposal.

Available abstracts and article text are clearly labeled.

Ideas you can inspect

Understand the reasoning behind a proposed next step.

01 Trace citations to source passages

02 See abstract and article-text coverage

03 Inspect assumptions and unknowns

Experiment proposal

- Research question & required data
- Method & baseline comparison
- Evaluation measure
- What would count against it

Editable · for human review

Citation checks establish provenance. Scientific interpretation needs human review.

Make research more approachable.

- See connections across papers
- Ask a sharper research question
- Design a manageable first test

Evidence first. Researchers in control.

Hackathon prototype · React · TypeScript · Node.js · OpenAI API
